dananwar2404.github.io/Cybersecurity-Portfolio

Education

Ferris State University, Big Rapids, USA
BSc | Information Security and Intelligence

Jan 2022 – Dec 2026

Skills

Security and SIEM Tools: Microsoft Sentinel, Splunk, Wireshark, RSA NetWitness

Cloud Platforms: AWS, Microsoft Azure

Digital Forensics Tools: Magnet Axiom, GetData FEX, Cellebrite, E3

Networking and Firewall Management Tools: pfSense, Nmap, Zenmap

Governance and Reporting Tools: Tableau, Power BI, Atlassian Jira

Security Frameworks: NIST CSF, ISO/IEC 27001, MITRE ATT&CK, OWASP Top 10, CIS Controls

Programming Languages and Automation: Python, Java, Bash, SQL, KQL, Linux CLI, Google Colab

Languages: English (Fluent), Hindi (Fluent), Urdu (Fluent), Arabic (Reading proficiency)

Work Experience

AI and Digital Experience Assistant (*In-person | Full Time*)

Feb 2026 – Present

Student Success Initiatives - Ferris State University | Big Rapids, Michigan, USA

- ❖ Administered the Navigate Connect AI chatbot by curating knowledge sources, validating AI-generated responses, and continuously improving answer quality and user experience.
- ❖ Engineered and maintained AI knowledge sources, training documentation, and retrieval content for the Navigate Connect chatbot, improving response relevance, self-service adoption, and knowledge retrieval accuracy.
- ❖ Evaluated AI chatbot performance by analyzing conversation logs, user feedback, and recurring support requests to identify knowledge gaps, optimize AI responses, and improve retrieval accuracy.
- ❖ Managed Student Success Office web content, ensuring digital resources remained accurate, accessible, and aligned with organizational policies and AI knowledge sources.
- ❖ Validated AI-generated responses against institutional policies and documentation to improve answer consistency, reduce misinformation, and support trustworthy AI deployment.
- ❖ Provided technical support for Navigate360 and campus technology while troubleshooting authentication, platform access, and user workflow issues.
- ❖ Collaborated with Student Success leadership to enhance AI-assisted digital services through continuous content optimization, workflow improvements, and user-centric design.

Special Projects Intern – Cybersecurity/Culture (*Remote | Full Time*)

May 2025 – Aug 2025

Navigator Truck Insurance Agency – Jenison, Michigan, USA

- ❖ Reviewed 10+ IT and culture-related projects, identifying 3 critical gaps and presenting recommendations adopted by leadership.
- ❖ Assisted in planning and executing an organization-wide event with 50+ participants, strengthening cross-departmental collaboration.
- ❖ Partnered with the leadership team to align cybersecurity awareness initiatives with company culture, improving policy adoption.
- ❖ Led a phishing simulation campaign that identified a 25% click-through rate, leading to targeted training and a 40% reduction in future incidents
- ❖ Monitored and analyzed security events using SIEM tools to identify potential threats and support incident response efforts.

Featured Technical Projects

PhishShield AI

Oct 2025 – Present

- ❖ Designed and developed an AI-powered phishing detection platform using Google Gemini to automate analysis of emails, URLs, and messages for phishing indicators.
- ❖ Engineered an LLM-driven analysis pipeline that generates contextual phishing assessments and security-focused explanations.
- ❖ Produced architecture, testing, and security documentation to support maintainability and future enhancements.

Equifax Breach Threat Analysis & MITRE ATT&CK Mapping

Oct 2025

- ❖ Conducted a technical analysis of the 2017 Equifax data breach by reconstructing the attack lifecycle using the MITRE ATT&CK framework.
- ❖ Mapped adversary tactics, techniques, and procedures (TTPs) to ATT&CK techniques to identify the progression of the intrusion.
- ❖ Analyzed attack vectors, privilege escalation, persistence, credential access, and data exfiltration activities to assess attacker behavior.
- ❖ Developed detection and mitigation recommendations by mapping ATT&CK techniques to defensive security controls and industry best practices.

ASYNCRAT Malware Analysis

Oct 2025

- ❖ Conducted static and dynamic analysis of ASYNCRAT within an isolated malware analysis environment.
- ❖ Examined persistence mechanisms, network communications, and process activity to identify indicators of compromise.
- ❖ Documented malware behaviour and recommended detection and mitigation strategies.
- ❖ Produced a comprehensive technical malware analysis report.

Incident Response Case Investigations

Sept 2025

- ❖ Conducted multiple incident response investigations involving compromised web applications, malicious network activity, database attacks, and DNS poisoning.
- ❖ Correlated packet captures, system logs, web server artifacts, and digital evidence to identify indicators of compromise (IOCs), determine attack vectors, and reconstruct attacker activity.
- ❖ Reconstructed attack timelines evaluated attacker tactics and persistence mechanisms, and developed containment, eradication, and recovery recommendations, including system patching, firewall rule updates, access control improvements, credential rotation, malware removal, service hardening, DNS remediation, and enhanced security monitoring.
- ❖ Developed recommendations for detection, mitigation, and defensive controls based on MITRE ATT&CK and industry best practices.

Enterprise Vulnerability Assessment & Remediation

May 2026

- ❖ Conducted vulnerability assessments of Windows, Linux, and web application environments using Nmap, Zenmap, WPScan, and automated vulnerability scanners.
- ❖ Identified and analysed network services, open ports, web application vulnerabilities, outdated software, and system misconfigurations to assess organizational risk.
- ❖ Prioritized vulnerabilities using CVSS severity ratings and developed remediation recommendations, including patch management, firewall hardening, service reduction, and secure configuration practices.
- ❖ Validated remediation efforts through follow-up scans to confirm risk reduction and improved security posture.

Certifications

- | | |
|---|----------|
| ❖ CompTIA Security+ (In progress) (CompTIA) | Dec 2026 |
| ❖ Google Cybersecurity Professional Certificate (Google) | May 2026 |
| ❖ ISO/IEC 27001 Information Security Associate (Skillsoft) | Dec 2024 |
| ❖ Fortinet Certified Associate – FortiGate Operator (Fortinet) | Nov 2024 |
| ❖ Networking Basics (Cisco) | Oct 2024 |
| ❖ PCEP (OpenEDG Python Institute) | May 2024 |
